SRV Host Records

Help

SRV Records, also known as Service Records are built from a list of several fields. We will build the full record for you if you fill in the appropriate fields. Please note that the "TTL" and "Class" fields are handled by us.

Service	Protocol	Priority	Weight	Port	Target (Hostname)
Service: (Symbolic name of service)		Weight: (Relative weight for records with the same priority)			
Protocol: (Usually UDP or TCP)		Port: (UDP or TCP port where the service can be found)			
Priority: (Priority of target host like MX)		Target (Hostname): (Location of the service)
